For use with the Stafford
Large Basin (1 Tap)
LN4MB11074

Features and Benefits

- High quality Brass with a beautiful chrome finish
- Elegant alternative to pedestal option
- Stocked product so always readily available

FAQ's

- (Q) Will this stand fit other basins?
- (A) No, it is specifically designed for the Stafford large Basin. Other basins have their own stand options.
- (Q) Is it simple to install?
- (A) Yes but we always suggest that a professional installer is used.
- (Q) Is it heated?
- (A) No.

Polished Gold – ZXBS4090200TH

Assembly Instructions

1: Screw the Threaded Rod (l) into the Foot (c). Repeat this for the other foot.

2: Slide the Leg Tub (b) over the Threaded Rod (l). Repeat. Insert this into the underside of the Top Frame (a).

3: Secure Leg into place by screwing the Adjustor Base (f) onto the section of Threaded Rod (l) protruding from the upper side of the Top Frame (a).

4: Screw the Adjustor Cap (e) into position as shown.

5: Position the assembled stand in the required position against the wall to which it is to be attached.

6: Ensure that the legs are standing fully upright and perpendicular to the floor. Also ensure that the side rails are sitting square and true to the wall.

7: Mark the wall where the screw holes will need to be drilled. Mark the floor around the foot of the unit.

8: Measure the distance marked Z on the diagram and add 4mm to determine the correct height for the Shelf studs to be affixed to the wall. The spacing of the two Studs should be the width of the shelf minus 140mm. It is suggested that each stud should be inset from the edge of the glass by 70mm. Mark the wall according to this guideline.

⚠ CAUTION: Before carrying out the following steps ensure there is no hidden pipework or cables in the area that you intend to drill. Always ensure that you take the necessary safety precautions.

⚠ NOTE: It may be wise at this stage to double check that the holes and markings for fixing are correct. Ensure that the stand will stand square and true to the wall and floor.

9: Remove the stand from the wall and drill appropriate sized holes for the insertion of screw plugs. Insert plugs into wall.

10: If necessary drill pilot holes into the floor where the location of the floor pegs will be.

11: Position the floor pegs carefully and screw them into position.

⚠ CAUTION: Affixing the floor pegs is a critical measure in ensuring the safe and proper installation of this product. This is a health and safety measure and must be carried out in order to maintain the structural integrity of the stand.

12: Locate the stand onto the floor pegs and align the holes in the fixing rose with the plugs in the wall. Using the screws fix the stand into position.

13: Carefully lower the basin into location and check that the product sits level. Fine adjustments can be made by rotating the Adjustor Caps. Once you are fully happy with the fit of the basin on the stand run a bead of silicon along the back face of the basin and ensure contact with the wall is made. At this stage please complete the necessary plumbing in of taps and waste fittings.

14: Carefully slide the glass shelf into position and secure by tightening the grab screw in the underside of the shelf studs

Assembly Instructions Hardwick stands

When installing the Harwick version of the basin stand it is important to handle the glass with care. You will be required to discard the glass shelf that will be contained within the top frame packaging.

 **CAUTION:** Affixing the floor pegs is a critical measure in ensuring the safe and proper installation of this product. This is a health and safety measure and must be carried out in order to maintain the structural integrity of the stand.

Care and Cleaning

Basin stands are produced by hand and slight imperfections on the surface detail are normal due to the material and the manufacturing process.

Plated finishes should be cleaned with warm soapy water and dried with a soft cloth. Under no circumstances should bleach or abrasive cleaning products, polishes, or detergent be used on plated surfaces and in particular should these materials be used on plated items it is possible that the surface will be damaged.
